Re: Front-End Developer (Remote)
Date: 23 July 2026

Dear Faisal Iqbal,

I'm applying for the Front-End Developer role. I have 4+ years of experience with React and Next.js — mostly building responsive UIs, reusable components, and REST-integrated screens.

Most of my recent work is on **Radius Directory** (RadiusTheme) — a multi-tenant classified SaaS. That's the product I know best:

- **Page Builder** — drag-and-drop layouts, nested containers, live preview
- **Related builders** — Form Builder, Template Builder, Menu Builder
- **Reusable UI** — 30+ widgets used across marketplace, account, and admin pages
- **Stack** — Next.js, React, TypeScript, Tailwind CSS

Other front-end work (shorter context):

- **RadiusTask** — app.radiustask.com (in-house) — task views (List / Board / Calendar / Gantt) and app shell UI
- **DLRMS** — dlrms.land.gov.bd — land-record entry and multi-step admin correction screens with REST APIs

I'm comfortable working independently in a remote setup, using Git day-to-day, and collaborating with designers and product managers. TypeScript, Next.js, and Tailwind are part of my daily stack — the same nice-to-haves listed in your post.

CV is attached. Thank you for your time.

Best regards,

Mazharul Islam Nahid
